

## Assignment-2: Python Basics

1. Write a python script to add comments and print “**Learning Python**” on screen.
2. Write a python script to add multi line comments and print values of four variables, each in a new line. Variable contains any values.
3. Write a python script to print types of variables. Create 5 variables each of them containing different types of data. (like 35, True, “MySirG”,5.46, 3+4j, etc)
4. Write a python script to print the id of two variables containing the same integer values.
5. Create four variables in a Python script and assign values of different data types to them. Write a Python script to print value, its type and id of each variable
6. Write a python script to print all the keywords
7. On Python shell use help() function and display the list of keywords
8. Create two Python files A0.py and A1.py. Create a variable in A1.py and assign some value to it. Write a python script to import A1 module in A0 and print value of the variable created in A0.py
9. Name the keywords, used as data in the Python script.
10. Write a python script to display the current date and time. First create variables to store date and time, then display date and time in proper format (like: 13-8-2022 and 9:00 PM)
